-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Claim Rejections - 35 USC § 112

1. Claims 9-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In the above claims 'the controller' lacks antecedent basis.

Claim Rejections - 35 USC § 103

2. Claims 1-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freed et al (5,891,185) in view of Sanders (5,897,579).

Freed teaches stimulating various regions of the patient's throat, see column 10. It also uses a plurality of electrodes which can each be independently energized, and which can also sense signals from the patient to provide feedback and modification of stimulation parameters, see column 7. The electrodes and stimulator of Freed, however, are external.

Sanders teaches a device which treats patients with vocal impairments. Sanders uses at least one implanted electrode and an implanted stimulator, col. 4:45+. It also synchronizes the stimulation so that each muscle contracts in a coordinated manner, which is necessary if the device is to work as intended. Thus, the skilled artisan would want to have synergistic movement of the patient's tissue in order to provide the proper treatment. Further, to use implanted electrodes, and an implanted stimulator, as shown by Sanders, with the device of Freed would have been obvious in that such would be a combination of known elements in the prior art which would have a predictable result - a device which is more portable as well as more cosmetically appealing to the user. Implanted stimulators and electrodes are also known in many areas, such as spinal stimulators, taught in columns 1-3 of Sanders, and pacemakers.
